## 8. Meter Readings

Reading obtained either remotely or manually from your meter at the time of billing. An 'estimated' next to either number denotes that the read for that month was estimated.

## 9. Meter Multiplier

Factor that is multiplied against the difference between the previous meter reading and the present reading to obtain the actual energy consumption. The multiplier is specific to the meter and how it is programmed.

## 10. Electric Units Billed (kWh)

Number of electricity units used in a reading period. One kWh is the amount of power to use a 40-watt light bulb for 25 hours.

## 11. Heat Factor Adjustment

Amount of heat in each CCF can vary, so the Heat Factor Adjustment compensates for any differences, and converts units to therms. Billing in therms assures you receive an equal amount of heat from each unit billed.

## 12. Natural Gas Units Billed (therms)

Measured by volume, CCF (100 cubic feet).
