What customers and communities can expect as energy demand grows

At Alliant Energy we deliver safe, reliable and cost-effective energy while powering community growth.

When large-energy-use customers, including data centers, come to your community, we understand your top questions are about your electric bill and your energy reliability.

Our commitment to customers

You will not pay for new large-energy-user growth. We follow a strict principle that if you use energy, you pay for it. And customers who use large amounts of energy pay for the electric grid investments needed to serve them, not existing customers.

When growth is structured the right way, it strengthens the grid and can help keep costs lower for everyone long term.

Your reliability comes first. Data centers are high-demand energy users, but these customers have smart, flexible systems that allow them to efficiently manage their energy systems. We complete necessary upgrades before we add a new energy load, so your service remains dependable.

None of this happens without oversight. Independent state regulators must review and approve the investments and rates charged to all customers. This oversight continues with ongoing reporting and performance reviews. Regulatory oversight along with our focus on transparency are intended to give you confidence in our commitments.

The result is growth without burden. Growth adds new jobs and increases the tax base for communities, resulting in a stronger and more resilient energy system. We commit to continued delivery of cost-effective, reliable service for all customers who depend on us – today and for the future.
